Web Task04C - Web Prog with www10 & www13, artwork (Prof. Min)

** Last Update: 2026-10-16 to remove Part(3) add; 2026-10-14 update for more info/help.

Part (1) 100 points. www10 sample code - In this exercise, we learn web prog skill to do the following tasks interacting with a web server (apache with PHP and mySQL): (1) how to create a database table (classic) for a list of books, (2) how to view the books (via web), (3) how to add a book (via web), (3) to delete a book (via web). This part may take 30 minutes.

Part (2) 100 points. www13 sample code - In this exercise, we learn web prog skill to do the log-in authentication process (using database table containing userid and password) interacting with user log-in web page. This part may take 30 minutes.

Part (3) 600 points. Design and implement PHP script (art-main.php) for Art Gallery for artworks (using **paintings** table in art DB in Lab14): (a) to view the artworks (from paintings table in art DB), ~~(b) to add an artwork,~~ (c) to delete an artwork (from DB table: paintings). You may combine (a) and (c) together in a web page with delete button for each artwork (painting). You may use Lab14 as your base code (you may use the base code in Lab14 Exercise14.10 or 14.11 (a list of paintings [by a selected artist]) and the code in www10 on how to do add or delete). **This part may take 4-6 hours.**

Note (1) Create/Use a folder (artwork in htdocs, and artwork.php) to keep all your work for this part (html, css, php, sql, codes, ... and its zip file to be submitted with your document/report. (2) Use the database and images used in Lab14 (e.g., art-small.sql). You may use the example (codes, db, images used) in Lab14 Exercise14.10 or Exercise 14.11.

Part(3) Bonus (400 points) to provide the functionality of "add an artwork (painting)" with ADD button, in addition to view and delete. If you have done this bonus task, state it clearly in the beginning that you have done Part(3) Bonus. Submit the document and its zip file for bonus part (together with this Task's submission files).

Part (4) 200 points. Design and implement PHP script (art-login.php) for login to Art Gallery for customers. Once logged in, the main page will be the web page (art-main.php) in (3) to do view, add, delete artwork(s). (4) Have 4 users in your user table where first name is firstN, lastname is lastN, userid is userN, password is passN where N is 1 to 4. For example, first1, last1, user1, pass1 for a record. Create a folder (artwork in htdocs and authenticate.php for the coding) and place all your work (html, css, js, php, sql, codes, ...) to be submitted with your report. You may assume that the picture of an artwork is already available in the server. This part may take 1-2 hour.

Note (1) Create/Use a folder (artwork in htdocs) for your work for this part (codes, ...) and its zip file to be submitted with your report. Note (2) Use the database (art) & tables created for Lab14.

Note: Part (5) for Update is deleted and not for this Task (10/09/26).

=========

Submission: Submit (1) your report (MS word document showing your work done for this task) with heading and subheadings, (a) screenshots of web page, (b) listing of php codes, (c) listing of HTML & CSS codes, (d) MySQL database (art) and its tables to be exported as SQL file, and (2) zip file (containing artwork folder). Upload both document and zip file to a box folder (named: Task4C) in your "individual" box folder. This is Individual Work.

Demo: Demo in Person is Required by individual to the graders (Aditya & Annan - during grader's office hours TTh 1pm-4:30pm, Date: 10/22 Th, 10/27 T, 10/29 Th, Location: ECSS 3.101). The sign-up sheet will be available (or ad-hoc first-come first-served) for your time-slot to do the demo. Bring your laptop to do the demo. You do your demo only for what you have done.

If demo is not done, then the task score can be set to be 0. Max score for this task without demo is: 20% of total score.

Demo signup sheet link: Click the link below to sign up for a time-slot for your demo in person (ECSS 3.101).

=========

Poor documentation may result in severe penalty (up to 70%). Please name your report (word document) to be: cs4485-teamNN-netid-Task4C where NN is your team number, netid is your UTD netid. In your report, provide (1) heading (about course, lab, yourself), (2) subheading for each major part. State clearly (in the beginning of your document) for what is done and what is not done.

Note. (1) When you get through login (userid and password) in (3), your browser asks to save userid and password, say NO always. Otherwise, you will never be able to test any other userid/password for the browser remembers what you saved for userid/password to be always used for log in to this website.

(2) Further your server saves the userid/password in the cache to be used for next login (that is, if it is successful, then it will pass the login process). If it is failed, then it will always fail. To solve this problem, stop and start your server (to clear out its cache memory).

Attachments & Sample Codes

02 PHP www example - short to use rev2.pdf (https://utdallas.instructure.com/courses/20581/files/4970325?wrap=1)

(1) Sample codes using mysqli and PDO (available in Box folder: # cs4485 shared resources for students & teams

(2) Use Lab14 art-small.sql (included in your Lab14 start folder, available in box). Attached here is the paintings table and its records for your view.

art-paintings.sql.txt (https://utdallas.instructure.com/courses/20581/files/5046208?wrap=1) (https://utdallas.instructure.com/courses/20581/files/5046208/download?download_frd=1)
